## J31-DB Wire Range

### **FAQ**

Can the J31-DB rebar clamp be used with #6STR copper wire?

The J31-DB is rated for use with wire sizes 6SOL – 2/0STR. Because the dimension and MCM size (i.e. the amount of copper in the wire) of #6STR falls within this range, the J31-DB is suitable for use with #6STR copper wire. This has been verified via routine qualification testing at Greaves Corp.

The UL listing covers the wire range #4STR-#2STR, because administratively it was based on an early product testing report.
