BUGLUGS™ Lay-in Lugs

FAQ Is the BUGLUGS™ Lay-in Lug approved for direct burial?

Yes, the BUGLUGS Lay-in Lug is CSA certified for direct burial grounding applications in earth and concrete. The primary application is for bonding in swimming pool applications.

The BUGLUGS Lay-in Lug is a tin-plated assembly of a split bolt with a tin-plated offset copper tang for mounting. (Because the copper tang was originally manufactured for use in the D700 series, it is marked accordingly.)

BUGLUGS Lay-in Lug is for use with copper wire only.

In addition to being fabricated of copper and copper alloy, the BUGLUGS assembly is tin-plated, which adds corrosion resistance to make it suitable for use on aluminum pool structures. In this application, use of oxide-inhibitor is recommended.
